the sixth international conference on miniaturized chemical and biochemical analysis systems known as iltas2002 will be fully dedicated to the latest scientific and technological developments in the field of miniaturized devices and systems for realizing not only chemical and biochemical analysis but also synthesis the first iltas meeting was held in enschede in 1994 with approximately 160 participants bringing together the scientists with background in analytical and biochemistry with those with micro electro mechanical systems mems in one workshop we are grateful to piet bergveld and albert van den berg of mesa research institute of the university of twente for their great efforts to arrange this exciting first meeting the policy of the meeting was succeeded by late prof dr michael widmer in the second meeting iltas 96 held in basel with 275 participants the first two meetings were held as informal workshops

from the third workshop iltas 98 420 participants held in banff the workshop had become a worldwide conference participants continued to increase in iltas2000 about 500 participants held in enschede and iltas2001 about 700 participants held in monterey the number of submitted papers also dramatically increased in this period from 130 in 1998 230 in 2000 to nearly 400 in 2001 from 2001 iltas became an annual symposium the steering committee meeting held in monterey confirmed the policy of former iltas that quality rather than quantity would be the key point and that the parallel session format throughout the 3

publishes papers that report results of research in statistical physics plasmas fluids and related interdisciplinary topics there are sections on 1 methods of statistical physics 2 classical fluids 3 liquid crystals 4 diffusion limited aggregation and dendritic growth 5 biological physics 6 plasma physics 7 physics of beams 8 classical physics including nonlinear media and 9 computational physics

microfluidics deals with fluids flowing in miniaturized systems it is a young discipline which is expected to substantially expand over the next few years stimulated by the considerable development of applications in the pharmaceutical biomedical and chemical engineering domains the book is an introduction to this discipline in the first chapter it presents a short historical background and discusses the main perspectives of the domain at economical and scientific levels then the physics of miniaturization and the fluid mechanics of microflows are discussed in the following three chapters dispersion electrical and thermal phenomena in miniaturized devices are presented a brief introduction to microfabrication techniques is given in chapter six and the book concludes by providing a few examples of microfluidic systems the book is written in a simple direct pedagogical way it emphasizes concepts and understanding rather than technical detail it offers a cross disciplinary view of the field embracing biological chemical physical and engineering perspectives by using the book the reader will have concepts methods and data to grasp situations which typically arise in microfluidic systems
